

Product information

Product name:	anti-Ergotamine pab ELISA-Stick with test reagents
Product number:	EE-2
Package size:	5 tests
General Description:	Ergotamine is a secondary metabolite (natural product) and the principal alkaloid produced by the ergot fungus, <i>Claviceps purpurea</i> , and related fungi in the family <i>Clavicipitaceae</i> . It possesses structural similarity to several neurotransmitters, and has biological activity as a vasoconstrictor. It is used medicinally for treatment of acute migraine attacks (sometimes in combination with caffeine), and to induce childbirth and prevent post-partum haemorrhage.
Principle:	The Ergotamine detection reagent set is sensitive and easy to handle test for the detection of Ergotamine. The test can be carried out without sample preparation or pre-incubation. Since the test does not require any labour equipment, it is especially suitable for analysis on the spot.
Sensitivity:	Detection limit 1 ng
Sample size:	max. 1 ml
Assay sample type:	any sample
Detection time:	1.5 h
